

MEETING PREPARATION DOCUMENT

MEETING INFORMATION

Title: Grade-Level Student Support Meeting
Type: SST
Date: 2025-09-01
Time: 01:53

MEETING AGENDA

I would like to discuss Crystal with her other teachers to see if we can work together to support her in all her classes.

STUDENT CONCERNS TO DISCUSS

Total concerns selected: 3

Crystal R (Grade 10th)

1. Concern

Severity: N/A | Location: Grade 10 13 students | Date: 8/30/2025

Description:

No specific description provided - please refer to concern category and severity level for context.

AI-Generated Interventions

Differentiation Strategy 1: AI-Generated Differentiation Strategies

Of course. As an educational intervention specialist, I will provide a comprehensively differentiated lesson plan for Crystal R., followed by evidence-based, research-backed strategies for ongoing support.

1. DIFFERENTIATED LESSON PLAN FOR CRYSTAL R.

Student: Crystal R. (Grade 10)

Focus Need: Learning Disability, Dyscalculia, EAL (Beginner)

Original Topic: Linear Equations in Slope-Intercept Form

Differentiated Topic: Understanding and Graphing Simple Linear Relationships

Duration: 50 minutes (with built-in flexibility)

Differentiated Learning Objectives (SMART Goals)

By the end of this lesson, Crystal will be able to:

1. Identify the starting point (y-intercept) on a graph and in a simple equation using a word bank and visual aids.
2. Demonstrate the concept of "slope as direction" (up/right vs. down/right) using a hands-on graphing tool.
3. Graph a line given a highly scaffolded worksheet with pre-numbered axes and clear, physical steps.

Adapted Materials

Crystal's Toolkit:

Personal Whiteboard & Markers For low-risk practice and easy correction.:

Graph Template Laminated graph paper with larger, bolder grids and a pre-drawn, bolded y-axis and x-axis. The squares are 2cm x 2cm for easier plotting.:

"Slope Walker" Tool A custom-made tool: a small, laminated card with a large plus sign on one side and a large minus sign on the other, with a arrow showing direction.:

Vocabulary Card A 3"x5" card with visual definitions.:

Slope (m) A picture of a staircase with "rise / run" and arrows labeled "up/down" and "right.":

Y-intercept (b) A picture of a ladder leaning against a wall, with a star where it touches the y-axis. Labeled "START HERE.":

Equation "A rule for a line: $y = (\text{direction}) x + (\text{start})$ ":

Calculator Pre-programmed with a simple graphing function to check work.:

Lesson Outline & Differentiated Activities

1. Warm-Up & Preview (10 minutes)

Activity Instead of the two problems, Crystal will work 1-on-1 or in a very small group with the teacher or a peer partner.:

Modified Task:

Problem 1 The teacher gives Crystal two points: (0, 3) and (1, 5) on her large-grid graph. The teacher asks: "Which number is bigger? Did we go up or down? How many steps?" (Focusing on the concrete concept of change).:

Problem 2 The teacher shows the equation $y = 2x + 5$ and asks Crystal to use her vocabulary card to circle the "start" number (b) and box the "direction" number (m).:

Goal Activate prior knowledge in a concrete, non-threatening way.:

2. Introduction & Chunked Content Delivery (12 minutes)

- Chunk 1: The Y-Intercept (b) - "The Starting Point" (5 min)
- The teacher uses the real-world example but makes it more visual. "Crystal, a taxi charges \$5 to get in [hold up 5 fingers]. This is our *start*. Let's draw a star on the y-axis at 5."
- Use the laminated graph to place a small star sticker at (0,5).
- Chunk 2: The Slope (m) - "The Directions" (7 min)
- "Now, each mile costs \$2. So from our star, we go... up 2 [move a marker up 2 squares], and over 1 [move the marker right 1 square]. Our direction is UP 2, OVER 1."
- Introduce the "Slope Walker" tool. For positive slope, use the + side. For negative slope (later), use the - side.

Language Simplification Consistently use "start number" (b) and "direction number" (m).:

3. Guided Practice (15 minutes)

Activity "Graphing with Your Tools.":

Example 1 $y = 2x + 1$:

Step 1 Crystal finds 'b' (1) and places a star on her laminated graph at (0,1).:

Step 2 Crystal finds 'm' (2). Teacher: "Is it a + or - number?" Crystal selects the **+** side of her Slope Walker.:

Step 3 Teacher: "From the star, your directions are: Rise +2, Run +1." Crystal uses a dry-erase marker to draw a dot up 2 and right 1. Repeat.:

Step 4 Use a ruler to connect the dots into a line.:

Example 2 $y = -\frac{1}{2}x + 4$:

- Repeat steps, but now use the - side of the Slope Walker. Focus on "down 1, right 2."

4. Independent Practice (10 minutes)

Modified Worksheet:

- Only 3 problems total.

Problem 1 Identify 'm' and 'b' from $y = 4x + 2$. Word bank provided: "direction number," "start number.":

Problem 2 Graph $y = 1x + 3$. The graph is pre-numbered (-5 to 5 on both axes). Instructions are icon-based: (1) Star @ (0, _), (2) Use Slope Walker, (3) Plot points, (4) Draw line.:

Problem 3 **Choice Board:** *Option A:* Graph one more equation. *Option B:* Use the graphing

calculator to input the equation and see if your graph matches. *Option C:* Write a sentence describing the line you graphed ("This line starts at ___ and goes up/down").:

Teacher Role Circulate but provide immediate, direct support to Crystal.:

5. Closing & Assessment (3 minutes)

Modified Exit Ticket:

- A small slip with two questions:

1. Circle the start number: $y = 3x - 2$. (Options: 3, -2, x)
2. Look at this graph of a line that crosses the y-axis at (0, -1) and goes up and right. Is the direction number positive or negative?

Success Criteria Crystal accurately identifies 'b' and the sign of 'm':.

Homework

Eliminated. Practice will be done in a supported setting during resource room or the next class's warm-up.

Specific Accommodations & Implementation Notes

Environment Crystal will be seated close to the teacher and away from major distractions. A designated "quiet work" corner is available if she becomes overwhelmed.:

Time The timeline is a guide. Crystal may need more time on guided practice, reducing independent practice time. This is acceptable.:

Implementation Steps:

Technology The graphing calculator is used as a self-checking tool, not a primary calculation tool, to build confidence.:

2. COMPREHENSIVE, RESEARCH-BASED DIFFERENTIATION STRATEGIES

The following strategies are based on the Universal Design for Learning (UDL) framework (CAST, 2018) and explicit instruction principles effective for students with LDs and dyscalculia (Fuchs et al., 2021).

1. Ongoing Content Modifications

Concrete-Representational-Abstract (CRA) Sequence permanently integrate this scaffolding into math instruction.:

Concrete Use algebra tiles to physically build equations. Use a vertical number line on the wall to demonstrate integer operations.:

Representational Use the large-grid graphs and "Slope Walker" tool consistently.:

Abstract Only introduce the standard algebraic notation ($y=mx+b$) after success with representational models.:

Language Simplification Consistently use paired terminology: "y-intercept" / "starting point"; "slope" / "direction number." Provide sentence frames for mathematical reasoning (e.g., "I know the slope is negative because the line _____").:

Research Citation The CRA instructional sequence is a hallmark of quality mathematics instruction for students with mathematics difficulties, proven to build a deeper conceptual understanding (Bouck, Park, & Nickell, 2017).:

2. Process Adaptations for Future Lessons

Task Analysis & Chunking Break down all multi-step problems (e.g., solving equations, graphing) into

explicit, numbered steps on a laminated checklist Crystal can use for every problem.:

Think-Aloud Modeling The teacher must consistently verbalize their thought process when solving problems. "The first thing I look for is... because... Then I...":

Guided Notes Provide notes with the core content already filled in, leaving blanks for key terms or simple examples that Crystal must complete during the lesson. This reduces writing burden and increases engagement with listening.:

Implementation Timeline These process strategies should be implemented immediately and used consistently for the remainder of the semester.:

3. Long-Term Assessment Alternatives

Portfolio-Based Assessment Collect evidence of learning over time (e.g., samples of graphed equations, completed guided notes, video of her explaining a process with her tools) rather than relying on single test scores.:

Modified Tests:

- Reduce the number of problems.
- Provide formulas and vocabulary banks.
- Use larger font and more white space.
- Allow use of her "toolkit" (graph template, calculator, vocabulary card) during assessments.

Focus on Mastery Allow for retakes on assessments after corrective instruction and practice, focusing on the mastery of standards rather than a single performance.:

4. Environment & Collaboration Optimizations

Strategic Seating Permanent seating in the front row, near a supportive peer partner who can provide clarification but not simply give answers.:

Collaboration Plan:

With EAL Specialist Coordinate to pre-teach and reinforce math-specific vocabulary (e.g., "intercept," "slope," "plot") using visual aids.:

With Special Ed Specialist Weekly check-ins to review progress monitoring data and adjust strategies. The special ed teacher can pre-teach core concepts in a small-group setting before they are introduced in the general classroom.:

With Family Regular communication (e.g., a Friday email or communication log) summarizing what was learned and one activity they can do at home (e.g., "This week we learned about slope. Ask Crystal to explain what 'rise over run' means using the stairs at home.")::

5. Progress Monitoring System

Tool Use Curriculum-Based Measurement (CBM) probes specifically for algebra readiness (e.g., basic fact fluency, simple graphing speed, identifying components from equations).:

Frequency Administer a 2-minute probe twice per week (e.g., Monday and Thursday). Example: 10 problems asking her to identify m and b from simple equations.:

Data Collection Graph the results (number of correct digits per minute). The **goal** is an increasing trendline.:

Data-Based Decisions If the trendline is flat or decreasing for 3-4 consecutive data points, the intervention (e.g., the strategies in this plan) must be adjusted or intensified.:

Research Citation CBM is a validated and efficient method for monitoring the progress of students with disabilities and making instructional decisions based on objective data (Stecker, Lembke, & Foegen, 2008).:

By implementing this differentiated lesson and adhering to these ongoing, research-based strategies, you can create an accessible learning pathway that empowers Crystal to build foundational math skills and achieve academic success.

Implementation Steps:

1. Review Student Needs

- 2. Adapt Instruction Methods
- 3. Implement Accommodations
- 4. Monitor Learning Progress

Timeline: Ongoing

Student Learning Profile

- Diagnosed with: Learning Disability
- EAL Learner (Beginner English proficiency)
- Currently struggling academically
- Other needs: Dyscalculia

3. Academic Concern

Severity: MODERATE | Location: Classroom | Date: 8/30/2025

Description:

I need support from her parents to work wither at home. Crystal has not completed
AND TURNED IN ANY HOMEWORK THIS WEEK.

Actions Already Taken:

- Talked with student
- Contacted parent

AI-Generated Interventions

Intervention Strategy 1: AI-Generated Tier 2 Intervention Recommendations

Of course. As an educational intervention specialist, I will provide a comprehensive, research-backed intervention plan for Crystal R. based on the profile provided.

1. Comprehensive Student Analysis

Detailed Analysis of Concerns The primary presenting issue is a complete lack of homework completion and submission. While this is an academic behavior, the root cause is likely multifaceted. It is critical to move beyond non-compliance and investigate the "why." Potential contributing factors include::

Skill Deficit The homework may be too difficult. Crystal may lack the foundational skills or understanding to complete it independently, leading to avoidance.:

Performance Deficit Crystal may possess the skills but lacks the motivation, organization, or executive functioning (e.g., planning, initiating tasks, working memory) to follow through.:

Environmental Factors Lack of a quiet space, materials, or time at home; significant home responsibilities; or insufficient parental support/oversight.:

Psychological Factors Anxiety about failure, perfectionism ("if I can't do it perfectly, I won't do it at all"), or low self-efficacy.:

Connection to Data The absence of submitted work is the primary data point. This necessitates diagnostic assessment to determine if it's a *can't do* or a *won't do* issue. The previous intervention (talking, parent contact) is a Tier 1 strategy and has proven insufficient, indicating a need for structured Tier 2 support.:

Risk Factors Academic failure, course credit loss, increased disengagement, development of chronic

work avoidance habits, and negative self-concept as a learner.:

Protective Factors Parental contact has already been initiated, indicating a potential line of support. As a 10th grader, Crystal is developmentally capable of self-reflection and goal-setting with appropriate scaffolding.:

2. Evidence-Based Intervention Framework

Primary Intervention Approach A dual-pronged approach combining **Academic Skill Scaffolding** (to address potential skill deficits) and **Self-Regulation Strategy Development** (to address performance deficits), grounded in the **Self-Regulated Strategy Development (SRSD)** model (Graham & Harris, 2003) and **Executive Function (EF) scaffolding** (Meltzer, 2018).:

Theoretical Foundation This plan is rooted in **Cognitive Behavioral Theory**, focusing on the interplay between thoughts (e.g., "This is too hard"), feelings (frustration, anxiety), and behaviors (avoidance). It also incorporates **Behavioral Theory** through structured reinforcement for incremental progress.:

Expected Outcomes & Success Indicators:

Short-Term (2 weeks) Crystal will submit at least 50% of assigned homework, complete with a signed Homework Accountability Log.:

Mid-Term (8 weeks) Crystal will submit 80% of assigned homework with a demonstrated increase in accuracy and a reduction in needed adult prompts.:

Long-Term (16 weeks) Crystal will independently submit 90%+ of homework, utilize strategies across content areas, and self-advocate for help when needed.:

3. Immediate Action Plan (Days 1-14)

Strategy 1: Homework Accountability & Planning System (HAPS)

Research Base This strategy integrates principles of **Executive Function support** (Meltzer, 2018), specifically targeting planning, organization, and self-monitoring. It uses an "I Do, We Do, You Do" scaffold.:

Materials Needed:

1. A dedicated Homework Planner/Agenda.
2. A weekly "Homework Accountability Log" (a simple checklist for each subject with columns for: Assignment, Due Date, Completed? (Y/N), Submitted? (Y/N), Teacher Initial, Parent Signature).
3. A designated "Homework Home Base" folder (2-pocket, labeled "TO DO" and "COMPLETED").

Implementation Steps:

1. **I Do (Day 1 - 5 mins at end of homeroom):** Meet with Crystal. Model how to write each assignment in the planner, estimate time needed, and check it off upon completion. Explain the Accountability Log.
2. **We Do (Days 2-5 - 3 mins):** At the end of homeroom, check in with Crystal. "Crystal, let's look at your planner together. What did you write for Math? What's your plan for completing it?" Guide her to fill out the Log. Initial it yourself.
3. **You Do (Week 2):** Provide a visual cue (e.g., a sticky note on her desk) at the end of homeroom. Crystal is responsible for writing assignments and filling out the Log. You provide a quick "spot check" and initial.

Data Collection The **Homework Accountability Log** is the primary data collection tool. Calculate

weekly percentage of assignments submitted. Also, track the percentage of assignments *written correctly* in the planner.:

Success Criteria Submission of 50% of homework assignments with a completed Log for two consecutive weeks.:

Strategy 2: Differentiated & "Homework Light"

Research Base **Universal Design for Learning (UDL)** Guideline 7: Provide options for recruiting interest (engagement) by optimizing individual choice and autonomy (CAST, 2018). Also addresses potential skill deficits by reducing volume to focus on quality.:

Materials Needed Modified assignments from content teachers.:

Implementation Steps:

1. **Collaborate:** Meet with Crystal's core teachers. Propose a 2-week "homework light" trial.
2. **Differentiate:** For each subject, reduce the homework load to the 5 most essential practice problems or the core concept question. The goal is practice, not punishment. Offer choice: "Complete any 5 of these 10 problems."
3. **Communicate:** Clearly explain to Crystal: "Our goal is to make sure you understand the key idea. Let's focus on these few problems so you can show me what you know."

Data Collection Compare accuracy on reduced homework vs. previous non-submission. Is she successful with a reduced load? This is a critical diagnostic data point.:

Success Criteria 80% accuracy on the modified, reduced homework assignments that are submitted.:

4. Short-Term Intensive Support (Weeks 3-8)

Primary Focus Area Building Self-Monitoring and Problem-Solving Skills.:

Intervention Program Explicit instruction in a ***"What to Do When You're Stuck"*** metacognitive strategy card.:

Frequency Brief (5-7 minute) coaching sessions 3 times per week during homeroom or a study hall.:

Progress Monitoring Fidelity of strategy use (tracked via a student self-rating), continued use of the Homework Accountability Log, and homework accuracy scores.:

Adaptation Protocol If homework accuracy remains below 70% after 4 weeks, initiate a formal diagnostic academic assessment to identify specific skill gaps in reading comprehension or math fluency that are barriers to independent work.:

5. Long-Term Skill Development (Weeks 9-16)

Maintenance and Generalization Strategies:

Skill Transfer Coach Crystal to use her planner and "Stuck" strategy in all classes. Brief check-ins with other teachers to encourage its use.:

Independence Building Fade the Homework Accountability Log to a weekly checklist, then to student self-monitoring. Move from teacher-initiated check-ins to student-initiated check-ins.:

Family Engagement Provide parents with a clear guide on how to support without enabling: "Your role is to ask to see the planner and check the 'Completed' folder, not to teach the content." Establish a bi-weekly email update on progress.:

6. Comprehensive Progress Monitoring System

Daily Data Visual check of Homework Planner and "Completed" folder. Quick chat: "What's your plan for finishing X?":

Weekly Assessment Calculate and graph the percentage of homework assignments submitted from the Accountability Log. Calculate average accuracy on submitted work.:

Monthly Review Analyze the weekly graphs. Is the trend line moving upward? Is accuracy improving? Has the student begun to generalize strategies?:

Decision Points:

Continue If trend is positive and student is meeting success criteria.:

Modify If progress plateaus for 2 weeks, increase coaching frequency or adjust differentiation.:

Escalate (to Tier 3/Special Education Evaluation) If there is no progress after 8 weeks of consistent Tier 2 intervention despite modifications, and diagnostic data suggests a significant skill deficit.:

7. Collaboration and Communication Plan

Team Members Homeroom teacher (lead), all core content teachers, school counselor, parents, and Crystal herself.:

Meeting Schedule Brief (10 min) weekly check-in with Crystal. Bi-weekly email update to parents and content team.:

Documentation Requirements The Homework Accountability Log is the central document. Maintain a simple log of coaching sessions and strategies tried.:

Parent Communication Schedule a 15-minute phone/video call in Week 2 to review the plan. Follow up with a weekly Friday email with a photo of the completed Log and a one-sentence update (e.g., "Great week! Crystal submitted 4/5 assignments!").:

8. Escalation and Support Protocols

Warning Signs Complete reversion to non-submission, decline in classwork, emotional outbursts when discussing work, reports of refusal to engage at home.:

Immediate Response Schedule a problem-solving meeting with the student within 24 hours. "I notice the homework has stopped. Let's figure out what's getting in the way now.":

Referral Criteria As noted in Progress Monitoring, after 8 weeks with no progress. Also, immediately refer to the school counselor if underlying anxiety or home stressors are suspected as the primary cause.:

Emergency Contacts School Counselor, School Psychologist, Building Administrator.:

9. Resource Recommendations

Professional Development "SMART but Scattered" by Peg Dawson & Richard Guare (for Executive Function strategies). Understood.org for UDL and EF resources.:

Educational Materials *The Homework Squad's ADHD Guide to School Success* by Joshua Shifrin (highly practical for any student struggling with EF).:

Technology Tools **Google Classroom** for clear assignment posting and deadlines. **Microsoft OneNote** or **Google Keep** for digital planning and note-taking. **Speech-to-Text** tools for written responses if writing is a barrier.:

Community Resources Check if local library offers after-school homework help or tutoring. Explore if there are any community-based organizations that offer academic mentoring.:

Implementation begins immediately. The key is consistent, calm, and collaborative implementation to diagnose the root cause and build Crystal's skills and confidence.

Implementation Steps:

1. Review Assessment Summary
2. Implement Immediate Interventions
3. Apply Short-term Strategies

4. Monitor Progress

Timeline: 2-6 weeks

Student Learning Profile

- Currently struggling academically

5. Concern

Severity: N/A | Location: Grade 10 13 students | Date: 8/29/2025

Description:

No specific description provided - please refer to concern category and severity level for context.

AI-Generated Interventions

Differentiation Strategy 1: AI-Generated Differentiation Strategies

Differentiation Strategies for Crystal R

Student Learning Profile Summary

Based on the provided learning profile information, Crystal demonstrates unique learning strengths and needs that require targeted differentiation strategies. This student would benefit from multi-modal instruction, structured support systems, and flexible learning options to maximize academic success and engagement.

1. Content Modifications

Adjusting Complexity

- Scaffolded Content Delivery: Break lessons into 10-15 minute chunks with visual organizers
- Multi-Level Materials: Provide same content at 3 different reading levels (below, at, above grade level)
- Concept Mapping: Use graphic organizers to show relationships between ideas
- Vocabulary Pre-Teaching: Introduce key terms with visual aids and real-world examples
- Concrete-Abstract Bridge: Start with hands-on examples before moving to abstract concepts

Multiple Representations

- Visual Supports: Create infographics, charts, and color-coded materials for key concepts
- Auditory Options: Provide recorded instructions, audiobooks, and verbal processing time
- Kinesthetic Activities: Use manipulatives, role-playing, and movement-based learning
- Digital Integration: Utilize interactive apps, virtual simulations, and multimedia presentations

Interest-Based Adaptations

- Student Interest Surveys: Connect curriculum to personal interests and hobbies
 - Cultural Connections: Incorporate culturally relevant examples and contexts
 - Choice Menus: Offer 3-4 topic options for research projects and presentations
- ## 2. Process Modifications

Instructional Delivery

- Think-Aloud Modeling: Demonstrate problem-solving processes step-by-step
- Chunked Instruction: Present information in small, manageable segments
- Wait Time: Provide 5-7 seconds for processing before expecting responses
- Multiple Exposures: Review key concepts through different activities and formats

Scaffolding Techniques

- Step-by-Step Guides: Create visual process charts for complex tasks
- Peer Buddy System: Pair with supportive classmate for collaboration and support
- Teacher Check-Ins: Schedule brief 2-minute progress checks every 15 minutes
- Success Criteria: Provide clear rubrics and examples of quality work

Technology Integration

- Text-to-Speech: Use assistive technology for reading support
 - Speech-to-Text: Allow voice recording for written responses
 - Organization Apps: Utilize digital planners and reminder systems
 - Interactive Whiteboards: Engage with touch-screen technology for kinesthetic learning
- ## 3. Product Alternatives

Assessment Options

- Portfolio Collections: Gather work samples showing progress over time
- Oral Presentations: Allow verbal demonstration of knowledge
- Digital Projects: Create multimedia presentations, videos, or interactive displays
- Performance Tasks: Use real-world applications and hands-on demonstrations
- Choice Boards: Offer 6-9 options for demonstrating learning

Expression Methods

- Written Options: Traditional essays, graphic organizers, annotated drawings
 - Verbal Options: Recorded explanations, debates, storytelling
 - Visual Options: Posters, infographics, comic strips, photo journals
 - Digital Options: Websites, presentations, video projects, interactive timelines
- ## 4. Learning Environment Optimization

Physical Space

- Flexible Seating: Standing desk, stability ball, floor cushions, traditional desk options
- Quiet Zones: Designated low-stimulation areas with noise-reducing headphones
- Organization Systems: Color-coded folders, labeled storage, visual schedules
- Lighting Options: Natural light when possible, reduce fluorescent glare
- Movement Breaks: Scheduled 2-minute movement opportunities every 20 minutes

Social Environment

- Strategic Grouping: Rotate between individual, pair, and small group configurations
 - Peer Support Networks: Establish study buddies and collaboration partnerships
 - Clear Communication: Visual and verbal instructions, posted classroom expectations
 - Positive Reinforcement: Frequent specific praise and recognition systems
- ## 5. Implementation Timeline

Week 1-2: Immediate Strategies

- Set up physical environment modifications (seating, organization systems)
- Introduce visual supports and communication methods
- Begin data collection on current performance levels
- Establish peer buddy partnerships and support systems

Weeks 3-6: Short-term Adaptations

- Implement scaffolded instruction techniques and chunked content delivery
- Introduce technology tools and assistive supports
- Develop and practice new assessment formats
- Monitor progress and adjust strategies based on student response

Ongoing: Long-term Support

- Maintain consistent environmental modifications and support systems
- Regularly update and refine differentiation strategies based on student growth
- Prepare transition materials for next grade level or new teachers
- Continue family communication and collaboration

6. Progress Monitoring & Data Collection

- Weekly Academic Data: Track completion rates, accuracy scores, and engagement levels
- Behavioral Observations: Document on-task behavior, social interactions, and self-regulation
- Student Self-Assessment: Weekly check-ins on learning preferences and challenges
- Work Sample Analysis: Review quality and growth in student products monthly
- Adjustment Protocol: Modify strategies if no progress seen after 2-3 weeks of consistent implementation

7. Collaboration & Communication

- Family Partnership: Share strategies for home reinforcement, communicate progress weekly
- Support Staff Coordination: Collaborate with special education team, counselors, and specialists
- Documentation: Maintain detailed records of interventions tried and student responses
- Professional Development: Seek additional training in differentiation strategies as needed

Note: These are research-based strategies that should be implemented consistently and monitored for effectiveness. Regular communication with all stakeholders ensures the best possible outcomes for Crystal.

Implementation Steps:

1. Review Student Needs
2. Adapt Instruction Methods
3. Implement Accommodations
4. Monitor Learning Progress

Timeline: Ongoing

Student Learning Profile

- Diagnosed with: ADHD
- EAL Learner (Beginner English proficiency)
- Currently struggling academically

ADDITIONAL NOTES

Will discuss with student support the possibility of developing and I.E.P. for Crystal.
